

Nagase Enzymes

Hydrogen Decomposing Enzyme

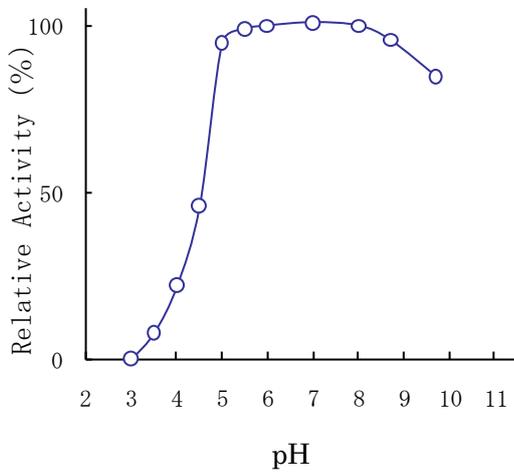

REYONET 200 EP

REYONET 200 EP is a liquid-type catalase preparation produced by the *genus Micrococcus*.
REYONET 200 EP catalyzes effectively the decomposition of hydrogen peroxide to water and oxygen.

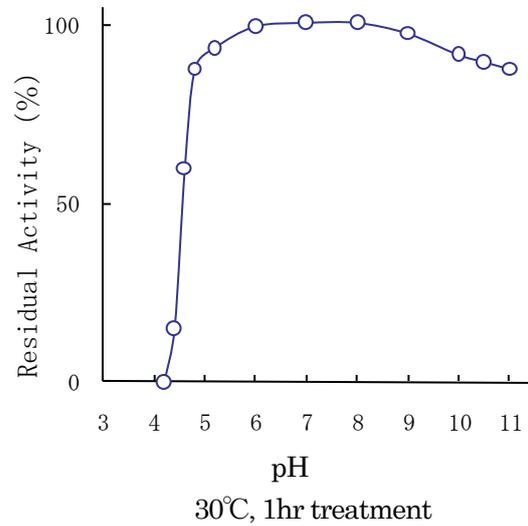

● General Properties of REYONET 200EP

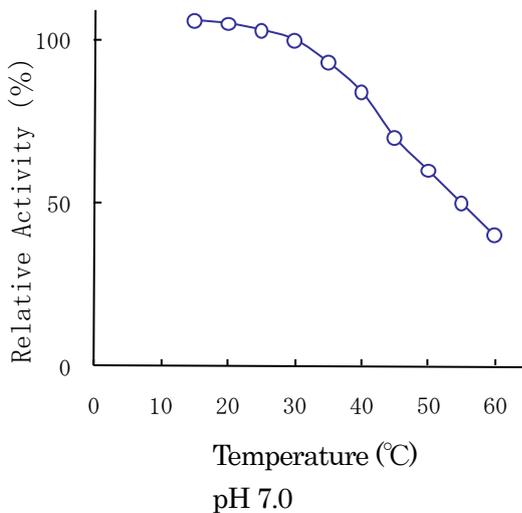

(1) pH Activity

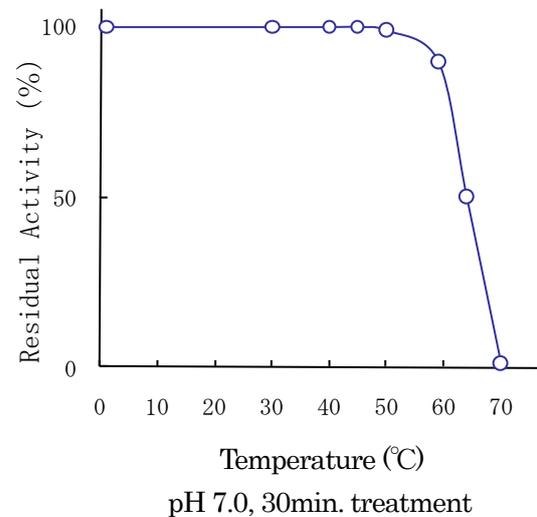

(2) pH Stability

(3) Temperature Activity

(4) Thermal Stability

Nagase Enzymes

● Definition of Activity

Add to mix 1.0ml of enzyme solution with 5ml of 10mM H_2O_2 solution (pH 7.0, 50mM phosphate buffer) and keep the mixture for 5 minutes at 30°C. Under these conditions, 1 CtUN is defined as the activity which decomposes 1 μ mole of H_2O_2 per minute.

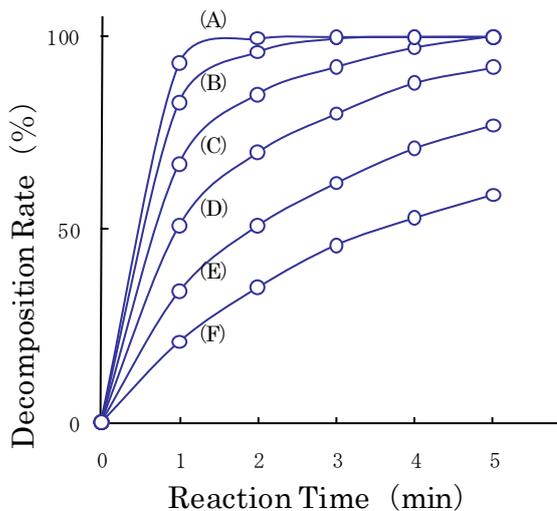

● Grade

REYONET 200 EP

200,000 CtUN/ml (Liquid)

● Applications

(1) Decomposition of Various Concentration H_2O_2 solution by REYONET 200 EP .

Concentration of H_2O_2

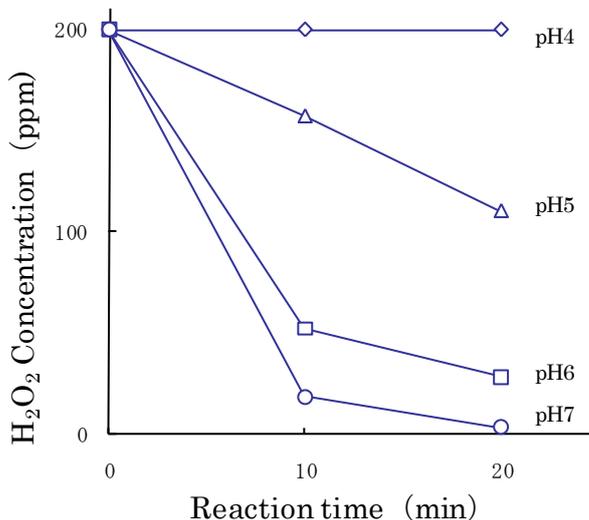

- (A) 0.036%
- (B) 0.072%
- (C) 0.144%
- (D) 0.288%
- (E) 0.576%
- (F) 1.152%

Temperature : 30°C

pH : 7.0

Enzyme Dosage : 4,800 CtUN/g H_2O_2

(2) Decomposition of Low Concentration H_2O_2 solution by REYONET 200 EP .

REYONET 200 EP
12,500 CtUN/g H_2O_2
20°C
